DETAILED ACTION

Response to Amendment

Applicant's amendments to the claims, filed, 9/7/2006, are accepted as compliant and appreciated by the examiner. In response to the amended claims, all previous grounds for rejection are withdrawn.

Allowable Subject Matter

Claims 1-26 are allowed. As discussed in applicant's arguments, filed 7/28/2006, and the telephonic interview with applicant's representative on 7/14/2006, the claims have been amended to sufficiently distinguish them from the prior art of record. Specifically, though prior art has been shown to teach utilizing two methods for sensor less rotor position determination, and has been found to teach an AC motor with a sensor less position monitoring system based upon the frequency component of the excitation supplied to the field winding, prior art has not been found to disclose or suggest a combination of dual sensor less position methods with an excitation frequency monitoring with a synchronous motor that has separate excitation for the field and stator windings. Submitted herein as closest pertinent prior art (in addition to that presented in previous rejections) are Seki (US pat pub 2002018586) which discloses a multi-phase AC motor that uses back-EMF to determine rotor position, Wogari (US pat pub 20040232862) which discloses use of the AC excitation to determine rotor position, and Schulz (US pat 6924617) which discloses dual methods for determining rotor position based upon speed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Moffat whose telephone number is (571) 272-2255.

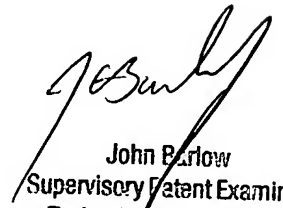

The examiner can normally be reached on Mon-Fri, from 7:30-4:00.
